Summary

A motivated Computer Science Engineering graduate with a specialization in Artificial Intelligence from Parul University, skilled in full stack development, AI/ML model integration, and scalable software solutions. Proficient in building intelligent applications using Python, Node.js, and React, with working knowledge of machine learning frameworks like TensorFlow and OpenCV. Passionate about embedded AI, robotics, and real-time systems, and actively exploring Rust and Go to strengthen expertise in AI-driven embedded computing and software-defined architectures. Adaptable to fast-paced R&D environments with a strong foundation in clean, efficient coding and problem solving.

Education

Bachelor of Technology	<u>Parul University</u>	<i>Vadodara, Gujarat</i>	06/2022 – Present
• Computer Science Engineering Specialization in Artificial Intelligence			CGPA: 8.63
Intermediate - CBSE	<u>M.K.Mehta School</u>	<i>Umergaon, Gujarat</i>	06/2020 - 03/2022
• Physics, Chemistry, Mathematics			Percentage: 66.2
Matriculation - MHSE	<u>St. Xavier's High School</u>	<i>Virar, Maharashtra</i>	04/2019 - 03/2020
			Percentage: 83.0

Technical Skills

- **Programming:** Java, Python (AI / ML), JavaScript, TypeScript, HTML5/CSS
- **Frontend:** React.js, Three.js, Responsive UI Design
- **Backend:** Node.js, Express.js
- **Database:** MongoDB, MySQL
- **AI/ML Frameworks:** TensorFlow, Keras, PyTorch (Basics), OpenCV
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, Google Cloud Platform (Hands-on)
- **Development Concepts:** REST APIs, OOP, SDLC, Application Tracking System, Candidate Tracking, Job Portal.

Soft Skills

- Problem Solving
- Analytical Thinking
- Creative & Innovative
- Team Collaboration
- Fast Learner
- Attention to Detail

Experience

Mern Stack Developer	<u>EnactOn Technologies Pvt Ltd</u>	<i>Internship</i>	06/2025 - Current
• Built and maintained full-stack applications using MongoDB, Express.js, React.js, and Node.js. Developed responsive UIs with React and Tailwind CSS, using custom hooks for state management. Implemented secure APIs, authentication (JWT, bcrypt), and optimized database performance.			
• Collaborated in Agile sprints, contributed to feature development, debugging, and code reviews. Integrated third-party APIs and deployed applications on Vercel, AWS, and internal servers.			

Projects

ArchaeoLearn	<i>Mern Stack and AI-ML Developed Project</i>	Live Demo - View Project
• ArchaeoLearn is an interactive archaeology and history learning platform designed to make historical education immersive through AI-powered artifact recognition, gamified quizzes, visual timelines, and an intuitive exploration interface. The platform modernizes traditional learning by combining MERN stack engineering with machine learning, real-time interactions, and multimedia-based education.		
• Key Features include AI-powered artifact identification , interactive chatbot assistance, world-map exploration, video galleries, quizzes, myth-fact analysis, and detailed cultural lifestyle modules.		
• Tech Stack: React.js, Node.js, Express.js, MongoDB, TensorFlow.js / Python ML Model, Socket.IO, Axios, Tailwind CSS, AWS/Vercel, Docker (optional ML containerization).

FarmMart

Mern Stack Developed Project

[Live Demo](#) - [View Project](#)

- FarmMarket is a feature-rich e-commerce marketplace that connects local farmers directly with customers, providing real-time inventory tracking, secure online payments, and a seamless shopping experience. The platform supports dual user roles (Farmers & Customers), advanced product search and filtering, role-based dashboards, and a complete order lifecycle—from product listing to checkout, payment, and delivery tracking.
- It integrates real-time notifications, image optimization, persistent cart management, and secure API endpoints to ensure a highly responsive user experience. The system is fully optimized for performance with server-side rendering, API caching, and database indexing.
- Key Technologies: Next.js 14, TypeScript, MongoDB, Mongoose, Node.js API Routes, JWT Authentication, Stripe Payment Gateway, Tailwind CSS, Vercel Deployment, Liveblocks (Real-time updates), React Hot Toast, REST APIs, Webhooks, In-memory Caching

Rentify

Mern Stack Developed Project

[Live Demo](#) - [View Project](#)

- Rentify is a comprehensive rental marketplace platform that allows users to list rental products, submit and manage rental requests, process secure online payments, and receive real-time in-app and email notifications. The system includes role-based dashboards, automated invoice generation, Stripe-powered transactions, and complete rental lifecycle management—from booking to payment, approval, and returns.
- Key Technologies: Next.js, TypeScript, PostgreSQL, Prisma ORM, Stripe Payments & Webhooks, JWT Authentication, Tailwind CSS, Nodemailer (Gmail SMTP), RESTful API Architecture
